Glossary of Terms

Bureau	An organisation transmitting PAYE information on behalf of a PAYE employer
EDI	Electronic Data Interchange
EDIFACT	Electronic Data Interchange for Administration, Commerce and Transport
Employer PAYE Reference	Made up of HM Revenue & Customs Office Number followed by the Employer Reference Number
Employer Reference Number	Unique reference supplied by the HM Revenue & Customs Office
GFF	Generic Flat File
HMRC	HM Revenue & Customs
ICR	Interchange Control Reference
HM Revenue & Customs Office number	Also known as Tax District number and Tax Office number
MARORS	Mileage Allowance Relief Optional Reporting Scheme
NINO	National Insurance Number
P11D10	Communication routing name of Expenses and Benefits message 2010 Tax Year end
Submitter Reference Number	A number issued to an Employer or Bureau to identify the submitter.
Trading Partner	An EDI term for an Employer or Bureau exchanging data with the HM Revenue & Customs

1. GETTING STARTED

1.1. Who Should Read This?

This document is aimed at everyone involved in the development of P11D Expenses and Benefits returns 2009 - 2010 via EDI, particularly software designers and programmers producing the software for the expenses and benefits details.

1.2. What is This Message About?

The P11D Expenses and Benefits message is used to make a return of expenses and benefits from the Employers/Bureaux system to the HM Revenue & Customs system(s). This document describes the information which must be sent by an Employer/Bureau to HM Revenue & Customs to make this return.

1.3. Frequency

This message is sent annually by an Employer/Bureau to HM Revenue & Customs.

Submissions will be accepted from 6th April 2010.

1.4. Data Flow

Data is transferred from the employer's system to the HMRC's system in a series of stages.

Stage 1 – the P11D is transferred from the employer to the HMRC Translation Service. If the EDI structure is correct, the data is transferred to Stage 2.

Stage 2 – at Stage 2 the P11D business data is validated. A report from Stage 2 is posted to the sender to report the acceptance or rejection of each P11D submission. If the P11D business data is correct, the P11D is lodged on the HMRC back end systems.

1.5. Submission Numbers

HM Revenue & Customs only expects to have one form P11D lodged annually for each employee. The submission of the P11D10 message will satisfy this requirement when it has been successfully transmitted, validated and lodged – see Section 1.4.

Any corrections to the original form should be sent to the PAYE HM Revenue & Customs Office on paper.

A P11D10 submission, identified by a unique Submitter Reference number, may be submitted only once. If errors are identified within a submission, the Employer or Bureau must correct the erroneous data and resubmit the entire P11D10 submission.

Employers and Bureaux must apply for their unique Submitter Reference number(s) from HMRC.

An Employer who has multiple PAYE references must apply for multiple Submitter Reference numbers, one for each PAYE reference. A benefit of this is the reduction in transmission costs, when errors are identified, corrected and the P11D is re-transmitted.

A Bureau submitting P11Ds on behalf of more than one Employer, must also apply for multiple Submitter Reference numbers, one for each of the Employer's PAYE references.

It follows therefore, that an EDIFACT interchange (UNB-UNZ) may contain one or more P11D submissions, each contained within an EDIFACT message (UNH-UNT). The unique Submitter Reference number and PAYE reference are contained within ATT segments (HDR.2.1) associated with an Employer (and not the Bureau).

Similarly, a 4* headed file may contain one or more P11D submissions, each under the cover of a 4* header. The unique Submitter Reference number and PAYE reference are contained within ATT records (HDR.2.1) associated with an Employer (not the Bureau).

One P11D submission = One Submitter Reference number = One PAYE Reference = One EDIFACT message (UNH-UNT) / One 4* headed batch of records

1.6. Summary of Changes

This section documents the changes since the P11D message for the Tax Year 2008 – 2009.

- The **structure** of the P11D message provided within this document remains unchanged from the P11D message published in the EB5 P11D 2008 – 2009 MIG.

The **data content** has been updated to meet the 2009 – 2010 changes as listed in the HMRC 2009-2010 EEC1 booklet which can be found on the HM Revenue & Customs website: <http://www.hmrc.gov.uk/ebu/eec1.pdf>

These changes are also listed below.

Amended Fields:

- **Tax Year End DTM/DTM1 Qualifier 166:** Validation changed: Must contain '2010'.

New Fields:

- None.

Documentation:

- Sections 5.1.1 & 5.2.1 (GFF & EDIFACT Examples) have been revised to remove the examples from the MIG as they are now included in a separate EDI Examples document which can be found on the HMRC Website at http://www.hmrc.gov.uk/ebu/ebu_paye_ts.htm.

2. DATA FORMAT - GFF AND EDIFACT

There are two formats that the data can be sent in – Generic Flat File (GFF) or EDIFACT.

The magnetic media fields used in the HMRC 2009-2010 EEC1 booklet are given together with their respective EDI segment/record names and codes.

2.1. Generic Flat File Format (GFF)

This is a flat file of data containing a number of named records with the data in fixed length fields in the record - See Section 5.1 for detailed GFF layout.

A GFF transmission file, which is sent within a single communications session, can contain one or more GFF interchanges.

All interchanges within the transmission file must be of the same type, i.e. all P11D10 interchanges; there must not be a mix of interchanges within the one transmission file.

2.1.1. GFF Interchange

A GFF interchange starts with a 4* header record, which provides the data communication routing information, and ends with the CNT record.

The 4* header also contains the 'message type' – in this case the P11D10 message.

Each GFF interchange must be uniquely identified by an Interchange Control Reference (ICR). The ICR is contained within the 4* header.

2.1.2. GFF Submissions

A transmission file from a GFF Trading Partner may contain one or more GFF interchanges, i.e. 4* batches of records.

A Bureau may submit one transmission file containing several interchanges - one interchange per Employer PAYE Reference.

2.1.3. Validation / Rejection

Each GFF interchange is separately validated. If an interchange is rejected, only that rejected interchange will be discarded; subsequent interchanges will be processed, and if validated successfully they will be forwarded to the HM Revenue & Customs application. The Trading Partner will be informed of the interchange rejection and expected to resubmit only the corrected interchange.

2.2. EDIFACT Format

EDIFACT is an EDI standard which is a file containing a number of named records with the data in delimited fields in the record – See Section 5.2 for detailed EDIFACT layout.

A transmission file, which is sent within a single communications session, can contain one or more interchanges.

All interchanges within the transmission file must be of the same type, i.e. all P11D10 interchanges; there must not be a mix of interchanges within the one transmission file.

2.2.1. EDIFACT Interchange

An EDIFACT interchange starts with a UNB Interchange Header, which provides the data communication routing information, and ends with a UNZ trailer.

Each EDIFACT interchange must be uniquely identified by an Interchange Control Reference (ICR). The ICR is contained within the UNB Interchange Header.

An EDIFACT interchange can contain one or more EDIFACT messages.

All EDIFACT messages within the interchange must be of the same type, i.e. all P11D10 messages; there must not be a mix of messages within the one interchange.

2.2.2. EDIFACT Message

An EDIFACT message starts with a UNH header and ends with a UNT trailer.

The UNH header also contains the 'message type' – in this case the P11D10 message.

2.2.3. EDIFACT Submissions

A transmission file from an EDIFACT Trading Partner may contain one or more interchanges (UNB-UNZ) and each interchange may contain one or more messages.

An Employer/Bureau has a choice of how data can be submitted for multiple Employer PAYE references:

1. One transmission file containing only one interchange (UNB-UNZ), and have multiple messages (UNH-UNT) within that single interchange - one message per Employer PAYE reference.
2. One transmission file containing several interchanges (UNB-UNZ) - one interchange per Employer PAYE reference.
3. One transmission file per Employer PAYE reference.

See examples below.

Example 1.

Transmission File1:

UNB
UNH - UNT for Employer 1
UNH - UNT for Employer 2
UNH - UNT for Employer 3
UNZ

Example 2.

Transmission File 1:

UNB, UNH - UNT, UNZ for Employer 1
UNB, UNH - UNT, UNZ for Employer 2
UNB, UNH - UNT, UNZ for Employer 3

Example 3.

Transmission File 1: UNB, UNH - UNT, UNZ for Employer 1

Transmission File 2: UNB, UNH - UNT, UNZ for Employer 2

Transmission File 3: UNB, UNH - UNT, UNZ for Employer 3

2.2.4. Validation / Rejection

Each EDIFACT message (UNH – UNT) is separately validated. If a message is rejected, only that rejected message will be discarded; subsequent messages will be processed, and if validated successfully they will be forwarded to the HM Revenue & Customs application. The Trading Partner will be informed of the message rejection and expected to resubmit only the corrected message.

3. THE P11D10 MESSAGE

The following page shows the P11D10 branching diagram which, on the whole, applies to both the GFF interchange and the EDIFACT message.

The UNH and UNT segments shown on the branching diagram only apply to the EDIFACT message; they do not apply to the GFF interchange, which starts with a 4* header record and is followed by a BGM1 record.

The diagram shows the sequence the data appears in, whether the data record/segment is mandatory or conditional and the maximum number of repetitions of the record/segment.

The diagram is presented in three sections, the Header section which appears once, the Detail section which is a repeatable group with up to 999,999 occurrences and the Summary section which appears once.

A segment is shown as a box with the segment name. It also shows whether it is mandatory or conditional and the number of times it may occur. The BGM, Beginning of Message segment, is Mandatory and can only occur once in the message.

A segment group is shown enclosed in its group box, with the mandatory or conditional status of the group and the number of times it may occur given in the bottom right hand corner.

In this example, Group 1 is conditional; it may occur once and can occur up to 99 times. The sequence of the data within the group is that it must start with a NAD (Name and Address segment) and can be followed by up to 99 ATT (Attribute segments).

The normal structure in the P11D10 message is for a NAD segment qualified with code BG (Employer) to be followed by an ATT segment qualified with code 7 (Employer reference). The Group then repeats with a NAD qualified with code TC (HM Revenue & Customs Office) followed by an ATT segment qualified with code 17 (HM Revenue & Customs Office number).

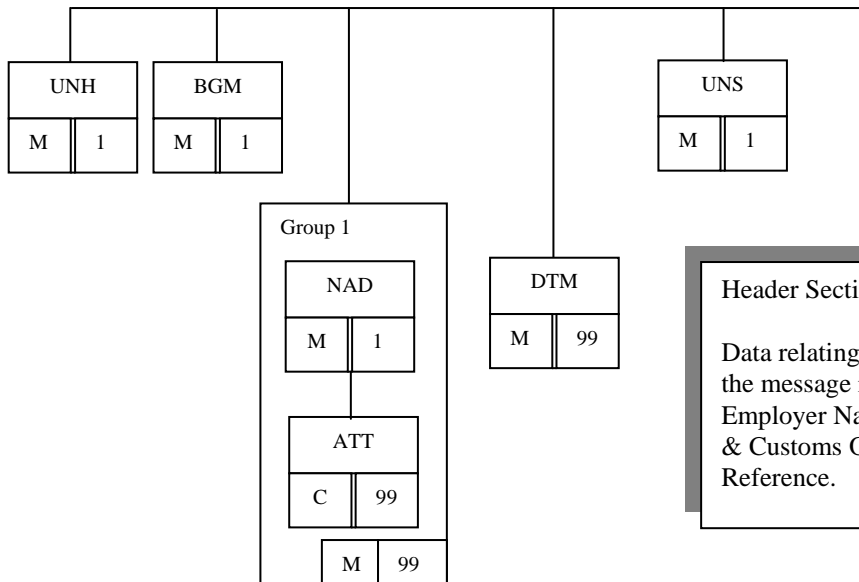

GFF

NAD1A BG
 ATT1 7 AZ12345
 NAD1A TC

Message Implementation Guidelines for Expenses and Benefits

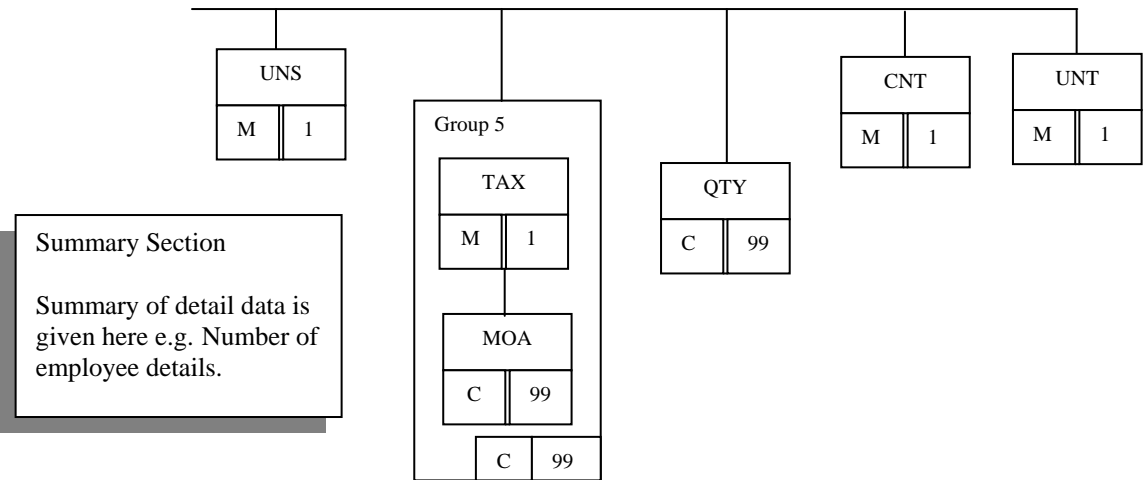

Header Section UNH – UNS

Data relating to the whole of the message is given here e.g. Employer Name, HM Revenue & Customs Office, Employer Reference.

Detail Section NAD Group 2

Data relating to the individual employee is given

Summary Section

Summary of detail data is given here e.g. Number of employee details.

4. P11D10 DATA ITEMS

Table 4.1.4 below lists the business fields of the P11D that need to be extracted.

The table indicates the segments and qualifier used to contain each of the fields and also indicates whether the business field is Mandatory or Optional.

e.g. Table 4.1.4 states that the HM Revenue & Customs Office number is Mandatory and must be contained within the ATT segment with qualifier = 17.

The Record Layouts in Section 5 give further details on the use of an element of data.

4.1. Field Status

4.1.1. Mandatory fields

Mandatory fields are required by the HM Revenue & Customs and must be provided by the Employer (unless it is a zero monetary amount – see Section 6.4).

Mandatory fields must appear in the correct format.

If mandatory fields are omitted or provided in an incorrect format the message will be rejected. See Section 5 for further detail of Record Layout and format of specific fields.

4.1.2. Optional Fields

Optional fields should be provided if available to the employer as they will help speed up processing by HMRC. Optional fields may become mandatory due to the content or presence / absence of other optional fields. e.g. Employee's Date of Birth is mandatory if the NINO is not provided.

When optional fields are provided, they must appear in the correct format.

If optional fields are provided in an incorrect format the message will be rejected. See Section 5 for further detail of Record Layouts.

4.1.3. Business Fields

EEC1 Record Id.	EEC1 Field No.	Business Field	Status	Segment or Record Name	Qualifier
		<u>Data Identification</u>			
		Form type	Mandatory	BGM/BGM1	12
0	3	Tax year (Year in which the Tax Year ends) must = 2010	Mandatory	DTM/DTM1	166
0	6	Submitter Reference number	Mandatory	ATT/ATT1	1
0	7	Bureau name	Optional	NAD/NAD1A	BU
		<u>Employer Identification</u>			
1	2	HM Revenue & Customs Office (Tax District) number (001-999)	Mandatory	ATT/ATT1	17
1	3	Employer PAYE reference	Mandatory	ATT/ATT1	7
1	4	HM Revenue & Customs Office (Tax District) name	Optional	NAD/NAD1A	TC
1	5	Employer's name	Mandatory	NAD/NAD1B	BG
1	6 - 10	Employer's address	Optional	NAD/NAD1A	BG
		<u>Employee record</u>			
20	3	Works/payroll number	Mandatory	ATT/ATT1	19
20	4	Employee's surname	Mandatory	NAD/NAD2B	BV
20	5	Employee's first forename	Optional	NAD/NAD2B	BV
20	6	Employee's second forename	Optional	NAD/NAD2A	BV
20	7	Director indicator <u>Mandatory</u> if employee is a Director	Optional	ATT/ATT2	3
20	8	National Insurance number	Optional	ATT/ATT2	11
20	9	Date of Birth <u>Mandatory</u> if NINO not present	Optional	DTM/DTM2	329
20	10	Gender <u>Mandatory</u> if NINO not present	Optional	ATT/ATT2	9

		<u>Sub-Return Grand Total</u>			
3	3	Total number of employees	Mandatory	QTY/QTY1	I

5. RECORD LAYOUTS

5.1. GFF LAYOUT

A GFF interchange is made up of a 4* header record followed by several fixed-length records specific to the P11D10.

These P11D10 records are made up of fixed-length fields which are delimited by a space character (not shown in table below).

Each P11D10 interchange is made up of a Header section (records BGM1 to UNS1), containing data relating to the whole interchange e.g. Employer HM Revenue & Customs Office; a Detail section (records NAD2A to UNS2) containing one or more individual employee details and a Trailer section (record CNT1) containing a control count.

Each record starts with a name, e.g. NAD1A is the Header section Name and Address record, ATT2 is in the Detail section and contains an Attribute of the employee (the numbers in the record names relate to the occurrence of the record within the interchange, they do not necessarily relate to the section of the interchange).

The fixed length records vary in length, e.g. all NAD1A records are 189 characters long: all ATT1 records are 45 characters long.

The records may be terminated with either a line feed LF or a carriage return/line feed CR/LF.

The format of the data is indicated as follows:-

- a = alpha
- n = numeric
- an = alphanumeric

The length is indicated by the number following the format type:-

- a4 = alpha field 4 characters in length
- n4 = numeric field 4 characters in length
- an4 = alphanumeric field 4 characters in length

The data format within the record contents column may be shown with .. between the format type and length. This means the data length is up to the length stated.

- an..10 = alphanumeric field of up to 10 characters padded with spaces
- n..11 = numeric field with a maximum value of up to 11 digits

Alpha and alphanumeric data is left justified and padded with spaces. Numeric data is right justified and padded with leading zeroes.

All monetary values are provided in pence. For further information - see Section 6.4.

The records and their contents used in the P11D10 interchange are shown in the following table. **GFF field contents with fixed values are shown in bold below.** Fields with variable contents are shown in Normal font.

Message Implementation Guidelines for Expenses and Benefits

Record Name	Record Description	From	To	Format / Length	Record Contents	Business Rules
4 *	Header Identifier	1	4	an4	Must contain ****

FTX1A Group M – Other items

This group can repeat up to 6 times, once each for the description of Class 1A NIC Other items and once each for the description of non Class 1A NIC items. The only descriptions allowed are, for Class 1A NIC items "SUBSCRIPTIONS & FEES", "EDUCATIONAL ASSISTANCE CL1A", "NON-QUALIFYING RELOCATION BEN", "STOP LOSS CHARGES", "OTHER" and "MULTIPLE" and for non Class 1A NIC items "SUBS AND PROFESSIONAL FEES", "NURSERY PLACES", "EDUCATIONAL ASSISTANCE", "LOANS WRITTEN OR WAIVED", "OTHER" and "MULTIPLE".

An FTX1A Group T – Other items –Totals, must follow if one or more Group M details are present

Record Name	Record Description	From	To	Format / Length	Record Contents	Business Rules
FTX1A	Free Text	1	5		Must contain FTX1A	Required to qualify Benefit record
	Free text identification	7	23	an17	Must contain M	M = code for Other items
	Free text	25	94	an70	Must contain DESC	This is used to indicate group M descriptions follow
	Free text	96	165	an70	Must contain Description of Class 1A NIC items – format an..34 or spaces	
	Free text	167	236	an70	Must contain Description of non-Class 1A NIC items – format an..33 or spaces	
GFF example: FTX1A M DESC SUBSCRIPTIONS & FEES SUBS AND PROFESSIONAL FEES						
					If used	
FTX1B	Free Text	1	5		Must contain FTX1B	Required to qualify Benefit record
	Free text	7	76	an70	Must contain Description of "OTHER" Class 1A NIC items – format an..30 or spaces	Where description of Class 1A NIC items is "OTHER" a further description can be added here.
	Free text	78	147	an70	Must contain Description of "OTHER" non-Class 1A NIC items – format an..30 or spaces	Where description of non Class 1A NIC items is "OTHER" a further description can be added here.
GFF example: FTX1B CLASS 1A EXTRA DESCRIPTION NON CLASS 1A EXTRA DESCRIPTION						
TAX1	Tax Details	1	5		Must contain TAX1	Required to qualify following MOA record
	Tax qualifier	7	9	an3	Must contain 58	58 = code for Cost to you of Class 1A NIC item
GFF example: TAX1 58						

Further employee details (NAD2 through FTX1A Groups) may be included here							
Record Name	Record Description	From	To	Format / Length	Record Contents	Business Rules	
UNS2	Section Identifier	1	5		Must contain UNS2		
GFF example: UNS2							
QTY1	QUANTITY DETAILS	1	5		Must contain QTY1		
	Quantity qualifier	7	9	an3	Must contain I	I = code for Total number of employees	
	Quantity	11	25	n15	Must contain Total number of employees		
GFF example: QTY1 I 0000000000000001							
CNT1	Control - Number of NAD2 through FTX1AGroups	1	5		Must contain CNT1		
	Total number of details	7	24	n18	Must contain Number of NAD2A records (same as Number of employees)		
GFF example: CNT1 000000000000000001							

5.1.1. GFF P11D Example

An example of a P11D GFF message can be found on the HMRC Website at: http://www.hmrc.gov.uk/ebu/ebu_paye_ts.htm.

5.2. EDIFACT LAYOUT

An EDIFACT message is made up of segments of data.

The segments used in the P11D10 message are shown below.

Each segment is made up of Composite elements and Stand-alone elements. Generally, Composite element names begin with a "C" for Composite, e.g. C002 in the BGM segment below. Composite elements within Service segments (UNB, UNH, UNT, UNZ) are different - their names begin with an "S" for Service, e.g. S001 in the UNB segment below.

Composite elements are made up of several Simple elements, each of which has its own identifying number, e.g. 1001 in the C002 Composite element in the BGM segment below.

Stand-alone elements are just like Simple elements, except that they are not part of a Composite element, e.g. 3035 in the NAD segment below.

Composite and Stand-alone elements are shown in BOLD below. Simple elements are shown in Normal font.

EDIFACT element contents with fixed values are shown in BOLD below. Contents with variable values are shown in Normal font.

The information above is important because it defines how the EDIFACT data is constructed.

EDIFACT uses special characters (+ : ? and ') to identify the position of data in the segment and consequently the meaning of the data.

' is the segment terminator, + is the segment tag and Composite/Stand-alone element separator, : is the Simple element separator and ? is the release character.

The release character ? immediately preceding one of the characters ' + : ? restores their normal meaning, e.g. O?'CONNOR means O'CONNOR.

The use of the other special characters is explained further below.

Each segment starts with a segment tag or name, e.g. ATT is the segment tag for the Attribute segment.

A plus sign + always follows the segment name. Therefore, ATT+ means this is an Attribute segment.

The Attribute segment carries data which is an attribute of the Employer or Employee as named in the preceding NAD segment.

The layout below shows that the Employer has a single attribute – Employer reference number, but the Employee has many attributes.

The first element of data follows the first plus sign +.

The ATT segment layout below shows that the first element is a Stand-alone element, (it does not start with an S or C), numbered 9017. The data carried in 9017 is the attribute function qualifier which in the P11D10 message is ZZZ.

ATT+ZZZ means this is an Attribute segment with an element Attribute Function Qualifier of ZZZ.

The plus sign + also marks the end of a Composite or Stand-alone element (except at the end of a segment – see later), giving ATT+ZZZ+

The next element in the ATT segment is a Composite element - C955 Attribute Type. This element is not used in the P11D10 message, so to signify this the plus sign is used to show the start of the next element giving ATT+ZZZ++

The next element in the ATT segment is a Composite element - C956 Attribute Details. This element is a Composite element containing 4 Simple elements - 9019 Attribute coded, 1131 Code list qualifier, 3055 Code list agency and 9018 Attribute. Data is present in each of these 4 Simple elements.

A colon : is used to separate each Simple element within a Composite element, e.g. ATT+ZZZ++7:2:IR:1234567

As there are no more elements in this segment the + is not used to show the end of this element.

Instead the apostrophe or segment terminator ' is used to signify the end of the segment, thus giving the complete segment as ATT+ZZZ++7:2:IR:1234567'

The data content sent in each segment and an example of how the EDIFACT segment will look is given in the following table.

The format of the data is indicated as follows:-

- a = alpha
- n = numeric
- an = alphanumeric

The length is indicated by the number following the format type:-

- a4 = alpha field 4 characters in length
- n4 = numeric field 4 characters in length
- an4 = alphanumeric field 4 characters in length

The data format within the record contents column may be shown with .. between the format type and length. This means the data length is up to the length stated.

- an..10 = alphanumeric field of up to 10 characters
- n..11 = numeric field with a maximum value of up to 11 digits

All monetary values are provided in pence. For further information - see Section 6.4.

Message Implementation Guidelines for Expenses and Benefits

Segment Name	EDIFACT Element Name.	Segment Content	Contents		Business Rules
UNB – Interchange Header	S001	SYNTAX IDENTIFIER			
	0001	Syntax identifier	Must contain	UNOA

	0020	INTERCHANGE CONTROL REFERENCE	Must contain	same value as 0020 in UNB	
EDIFACT example: UNZ+1+2'					

5.2.1. EDIFACT P11D Example

An example of a P11D EDIFACT message can be found on the HMRC Website at: http://www.hmrc.gov.uk/ebu/ebu_paye_ts.htm.

6. PROCESSING CHECKLIST

6.1. Registration

All EDI users, whether Software Providers, Employers or Bureaux, must register with HMRC before they can test their data. It is recommended that you register your intent to use EDI as soon as possible after commencing development.

Online Service Helpdesk contact details: 0845 60 55 999 or

helpdesk@ir-efile.gov.uk

6.2. Character Set

The character set which may be used within the message is given in Appendix B.

Any message containing characters outside this specific character set, e.g. # [] \ _ will be rejected before reaching the HM Revenue & Customs application. The error will be reported to the sender.

6.3. Interchange Control References

Each interchange sent by an Employer/Bureau must contain a unique "Interchange Control Reference" (ICR) in its header.

For EDIFACT submissions, the ICR is contained within the UNB segment; for GFF submissions, the ICR is contained within the 4* header.

If any problems occur with the transmission or validation of the data prior to it being processed by the HM Revenue & Customs, the ICR will be used to reference the interchange that has failed.

It is essential that the ICR is unique for each P11D10 interchange sent. It is recommended that the ICR is sequential and increments, i.e. maintain one sequence of ICRs for the messages within this group.

6.4. Monetary Values – Pence NOT Pounds

All monetary values must be provided in pence.

You *must* ensure that rounding errors do not appear in the return by rounding pence down to the next lowest whole pound *prior to making the calculation*.

- If the rule is “ $a + b = z$ ”, the calculation “**1234.56 + 234.78 = 1469.34**” must be presented as “**1234.00 + 234.00 = 1468.00**”.
- If the rule is “ $x - y = z$ ”, the calculation “**1234.56 - 234.78 = 999.78**” must be presented as “**1234.00 - 234.00 = 1000.00**”.

The validation performed does not perform "reality checks" on monetary values. The onus for ensuring values are correct is on the sender.

Only non-zero monetary amounts marked as Mandatory must be provided. Zero monetary amounts, even though marked as Mandatory, need not be provided; these values will always be assumed to be zero. Therefore, if a value is omitted in error the Employer may be liable to penalties.

6.5. Monetary Values – Tax/MOA pairing

All monetary values must be provided in a pairing of TAX/MOA records or segments.

The TAX record/segment qualifies (provides the meaning of) the monetary amount provided in the following MOA record/segment.

6.6. GFF Record Lengths

All GFF records must be the correct length as defined in Section 5.1.

A common problem is that the GFF records are the incorrect length, this often occurs when a previously unused optional record is produced. As part of your development please ensure all record lengths, especially optional records, are correct.

6.7. Sending Data to HM Revenue & Customs

The Employer/Bureau is responsible for ensuring transmitted data has been received either by the Value Added Network (VAN) or intermediary communication provider.

This is normally achieved by either checking reports issued by the VAN or setting your communication software to request End to End Responses (EERPs) and checking they are successful.

6.8. Error Correction

The Employer/Bureau is responsible for correcting and resubmitting data reported as faulty.

For EDIFACT submissions, each message is separately validated, i.e. if one message within the interchange is reported as faulty, only that message will be rejected. Subsequent messages will be processed and if validated successfully they will be forwarded to the HM Revenue & Customs application.

For GFF submissions, each interchange is separately validated, i.e. if one interchange is reported as faulty, only that interchange will be rejected. Subsequent interchanges will be processed and if validated successfully they will be forwarded to the HM Revenue & Customs application.

In both cases, the Interchange Control Reference (ICR) will be quoted to the Employer/Bureau who will then be expected to correct and resubmit the data.

APPENDIX A – P11D10 CHARACTER SET

Business data for the P11D10 message is restricted to the following 45 ASCII characters:

Letters, upper case	A to Z
Zero to nine	0-9
Oblique	/
Hyphen	-
Comma	,
Full stop	.
Apostrophe	'
Ampersand	&
Right-hand parenthesis)
Left-hand parenthesis	(
Space character	space
