June 2011

¹ Prior to 1992-93, some of the statistics included people who had been donating but were no longer doing so. Statistics from 1992-93 include only the numbers of current donors.

² Includes the 10 per cent payroll giving supplement which expired in 2003-04. Statistics from 2002-03 onwards are rounded to the nearest £10m.

³ Statistics for 1999-2000 and 2000-01 include donations under the Children's Promise campaign. The data on the number of donors are unreliable from 2000-01 onwards due to problems reporting the numbers of donors in staff pooled funds. The jump in donors in 2004-5 is thought to be overstated because the statistics for earlier years are probably underestimates.

Notes

The statistics come from annual returns and a quarterly telephone survey of agency charities. They are classified as official statistics and as such are not part of National Statistics.
