Table updated January 2010

Notes on the Table

- (1) Latest year of survey (2006-07 Survey of Personal Income).
 (2) Projection year based on 2006-07 Survey of Personal Income (SPI) and Pre Budget Report 2009.

Share of total income (before and after tax) and total tax of total income (before tax) for percentile groups

- This first part of the table gives the distribution of total income before tax, the second and third parts give the distribution of income after tax and income tax liabilities - holding all individuals in the percentiles defined by total income distribution (i.e. defined by the first part of the table). The table covers taxpayers only.
- Total income is the sum of all income subject to tax for the year (see the Income tax statistics and distributions introduction). For most types of income this is approximately the same as income that is earned in the tax year but this is not the case for self-employment income (see the notes on the tables for 3.9 and 3.10) and some other kinds of income.
- This table shows the share of total income (before and after tax) and total tax, for each percentile group; and for individual taxpayers allocated to these percentile groups. Individuals are attributed to percentile groups based on their total income before tax.
