July 2003

Contents	PAGE
Introduction	1
In-work families with CTC or WTC awards in each country, and in each Government Office Region in England, July 2003	2
In-work families with CTC and WTC awards in each local authority, July 2003	3
In-work families with CTC and WTC awards in each constituency, July 2003	13
Appendix A: Sampling method and sampling error	26

Introduction

These tables show the number of families in work and with Child Tax Credit (CTC) or Working Tax Credit (WTC) awards in each local authority (county, district and unitary authority) and in each parliamentary constituency.

The tables are consistent with the figures of families in work and with awards in each country of the United Kingdom, and in each Government Office Region, shown in Table 8.2 of "Child and Working Tax Credit Quarterly Statistics. July 2003". This table is reproduced in this volume.

The local authority and constituency of each sample case were identified using the postcode held on the CTC / WTC computer system. These postcodes were matched to the 2002 Version 3 Gridlink Postcode Directory supplied by the Office for National Statistics for Great Britain (which identified the associated local areas as at October 2002), or the May 2003 Directory supplied by Northern Ireland.

Some postcodes do not appear in these Directories. Families with such postcodes starting "BT" are allocated to Northern Ireland in the regional table, and appear as "Not known" in the Northern Ireland sections of the local authority and constituency tables. Families with other such postcodes, or with no postcode, are allocated to "Foreign and not known" in the regional table; they do not appear in the local authority and constituency tables.

The "All with awards" figures include both families with positive awards and families with zero awards (tapered to zero), based on their circumstances at the reference date and their annual income reported by that date. Families with zero awards may have positive awards based on their circumstances at other times in the year, and may finally qualify for positive annual awards based on all their circumstances in the year and their actual 2003-04 incomes.

"Recipients" includes only families with positive awards at the reference date. The tables show all recipients, and recipients receiving CTC (split between those with awards above the family element and others). Families with awards tapered to zero and families receiving WTC but not CTC are not shown separately; most estimates of their numbers would have very large relative sampling errors.

The figures are estimates based on a sample comprising 10 per cent of single adults and 20 per cent of couples with awards at the reference date. Appendix A shows how to find the sampling uncertainties associated with the figures shown in these tables; those associated with the "All with awards" figures are shown in the tables. Care should be taken to ensure that any inferences drawn from the figures are statistically valid.

Estimates for the City of London and Isles of Scilly are combined with those for neighbouring local authorities.

Appendix A: Sampling method and sampling error

The tables are based on a random sample of families with CTC or WTC awards at the reference date. The sample comprises 10 per cent of such single adults (with or without children) and 20 per cent of such couples. Each figure in the tables is derived by weighting the relevant sample cases by the inverses of these sampling fractions¹.

The figures in the tables are therefore estimates, but we know how accurate they are. For example, suppose that there are 100,000 couples with a characteristic. This number is not known, and we are to estimate it via the sample. Each couple is sampled with a probability of 0.2. Statistical theory says that there is a 95 per cent probability that the number sampled will lie between 19,752 and 20,248, and that the resulting estimate will lie between 98,760 and 101,240. At least approximately, then, where an estimate of 100,000 is derived from the sample, the true figure lies between these figures, with a 95 per cent probability. That is, the "95 per cent confidence interval" for the estimate is the estimate itself plus or minus 1,240.

The width of the confidence interval varies with the size of the estimate and the sampling fraction, as shown in the table below. For estimates that comprise a mixture of couples and single adults, the figures will lie between the two sets shown, according to the mix.

Confidence intervals for estimates of families with CTC or WTC awards				
Estimated value	95% confidence interval		As % of the estimate	
	Couples	Single adults	Couples	Single adults
'000	'000	'000		
1	± 0.1	± 0.2	± 12%	± 19%
2	± 0.2	± 0.3	± 8%	± 12%
5	± 0.3	± 0.4	± 6%	± 8%
10	± 0.4	± 0.6	± 4%	± 6%
25	± 0.6	± 0.9	± 2.5%	± 4%
50	± 0.9	± 1.3	± 1.8%	± 2.6%
100	± 1.2	± 1.9	± 1.2%	± 1.9%
250	± 2.0	± 2.9	± 0.8%	± 1.2%
500	± 2.8	± 4.2	± 0.6%	± 0.8%
1,000	± 3.9	± 5.9	± 0.4%	± 0.6%

¹ Each case is further weighted so that the overall total equals an independent count of families with awards.
